Success/Errors (274 days)   ⌃

■ OK   ■ Err

Note: This graph represents the number of success plays or errors that the user noticed when trying to play your channel. This may be caused by several different reasons. From network connection difficulties, timeouts, origins of users, station with too many users at a
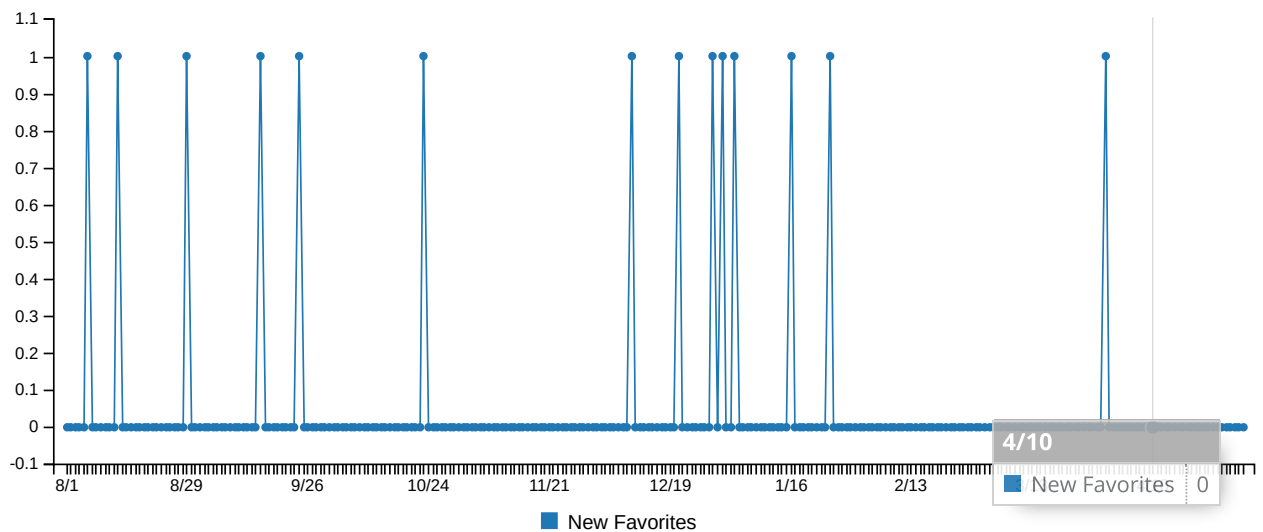

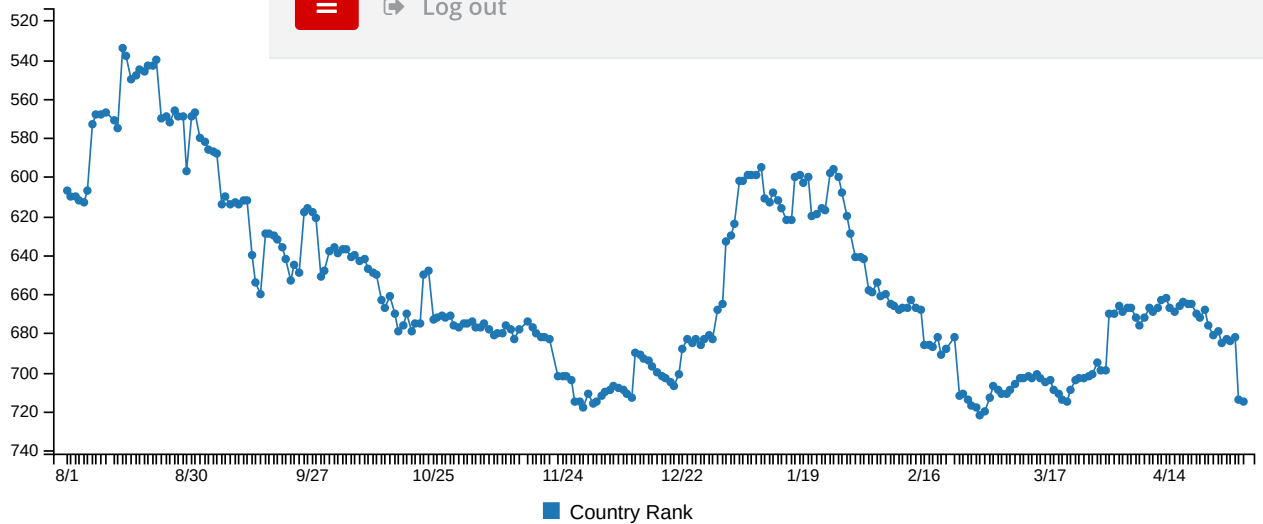

Hours played (274 days)

Note: Total number of hours being played by all the different users.

Number of new favorites (274 days)   ⌃

4/10
■ New Favorites   0

Note: Number of times a user adds this station to their favorite stations list

Radio top ranking per country (274 days)   ⌃

Country Rank

Note: Mytuner algorithms use several variables to calculate each day a "popularity" radio station per country inside our ecosystem of stations according to the factors we find most relevant and that may change over time.
This does not reflect necessarily the specific popularity of each radio on each country, or any other country specific ranking systems.
Mytuner needs to have a order of relevance to show to their users in order to minimize clicks, as well as to provide users with a good experience inside the app. So we are taking into consideration moving average of the following factors: number of past hours played, % errors, add to favorite propensity.
